Apéro Hour

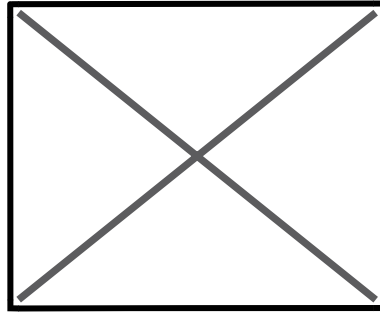

Il y a une grande différence entre les deux types de données. Les données structurées sont celles qui sont organisées de manière à être facilement analysées et traitées par un ordinateur. Les données non structurées, quant à elles, ne sont pas organisées de cette manière et sont donc plus difficiles à analyser et à traiter. Les données structurées sont généralement stockées dans des bases de données, tandis que les données non structurées sont souvent stockées dans des fichiers ou des documents. Les données structurées sont donc plus faciles à gérer et à utiliser que les données non structurées.
